

FLAME ARRESTOR

Isolation of flame and protection of the downstream circuit

APPLICATION AND PRODUCT FEATURES

- Used in LPG, Ethylene Oxide and Hydrogen lines vents and other applications.
- Based on principle of Davy's Safety Lamp for isolation of flame and protection of facilities downstream of the flame arrestor.
- Installed on pipelines, discharge vents and discharge line from Safety Valves and other applications in the process industry.
- Available in screwed end and flanged end variations.
- Element made of special material and design to suit high pressure inflammable gas applications.
- Available in sizes of 25 mm NB upto 150 mm NB.
- Manufactured as per international codes & standards.
- Having excellent track record at over 500 industries where our flame arrestor has been installed for a variety of applications.
